EDUCATION

Istinye University | *Bachelor's Degree in Software Engineering*

Istanbul, Türkiye | 2022 – 2026

- Cumulative GPA: 3.60 / 4.00 (High-Honor Dean's List)

EXPERIENCE

Software Engineer - Internship | *Techniaa Systems*

Istanbul, Türkiye | Aug-Sep 2025

- Developed RESTful API services using Node.js and Express.js and TypeScript for production-level backend services
- Implemented a fully functional and secure authentication system with JWT and stored user data on MongoDB
- Applied my knowledge in frontend with React, backend with Node.js, and AWS cloud services in fullstack projects

SKILLS

Programming Languages:	JavaScript, TypeScript, Python, Go (GoLang), SQL
Frameworks:	React.js, Next.js, Vue.js, Node.js, Express.js, Nest.js, React Native, AI/ML, Scikit-learn, RAG
Databases:	PostgreSQL, MySQL, MongoDB, Vector Databases, Redis (Caching), AWS S3 (Storage)
Cloud & Tools:	AWS, Git, GitHub, Docker, Stripe, Google API, OpenAI API, Claude Code, Cursor
Spoken Languages:	English (C1) Arabic (Native) Turkish (A2)

CERTIFICATIONS

- MongoDB Node.js Developer Path MongoDB University | 2023

PROJECTS

- Serva – AI-Powered Multi-Tenant Restaurant SaaS Platform
 - Architected a production-grade SaaS platform (React, Node, PostgreSQL, AWS S3)
 - Built a multi-tenant restaurant management app with an AI waiter supported digital menu for customers
 - Integrated Stripe for user subscription management, and Stripe Connect for implementing platform payments
 - Implement AI voice waiter and LLM-based chat waiter with integrated tools using Gemini and OpenAI models
 - Developed a React Native + Expo mobile app for restaurant owners providing monitoring, analytics, and control
 - Implemented all kinds of security and optimization features (eg. rate limiting, image compressing)
- Facial Recognition and GPS Geofencing Guarded Anti-Cheat Lecture Attendance System [GitHub](#) | [Demo](#)
 - Architected a multi-service platform using a Go/Gin backend, React Native mobile app, and React dashboard
 - Built a FastAPI microservice using DeepFace and a PostgreSQL Vector Database for facial recognition
 - Implemented location validation mechanism using native device GPS geofencing
- AI-Powered Smart Wound Dressing with Real-Time Monitoring [GitHub](#) | [Demo](#)
 - Achieved over 80% accuracy after training ML models on medical datasets with over 10,000 records
 - Trained 2 standard machine learning models using Random Forest and Linear algorithms using scikit-learn
 - Integrated generative AI and LLMs using Google Gemini API to generate patient analysis
 - Exposed models with Flask and built a Vue + TypeScript web interface for real-time monitoring
- Real-Estate Platform Web App [GitHub](#) | [Demo](#)
 - Built a full-stack real estate platform (MERN + TypeScript) featuring property listing, authentication, and more
 - Designed responsive and interactive UI in Figma, built over 50 components using React and Tailwind CSS
 - Developed a REST API with 20+ endpoints supporting authentication, filtering, and file uploads on AWS S3
 - Utilized frameworks and libraries such as React.js for the frontend, and Express for the backend
- Node.js Library for Creating Filesystem JSON Databases [GitHub](#) | [Demo](#)
 - Developed and published a Node.js NPM package for creating filesystem JSON-based databases
 - Implemented 20+ database operations with OOP, enabling CRUD and advanced query functionalities
- Course Ranking System using PFS-CIMAS-ARTASI Multi-Criteria Decision-Making Model [GitHub](#) | [Demo](#)
 - Collaborated with a team of 4 engineering students in building an MCDM based course ranking system
 - Collected data from 12 experts of varying importance levels such as university professors and IT specialists
 - Developed a software program in TypeScript for Picture-Fuzzy-Set based CIMAS-ARTASI decision model
